Balancing equations is essentially a system of linear equations. Recognizing that certain coefficients repeat across related reactions allows students to apply a "copy and paste" strategy, saving valuable test time. Start by isolating key quantities—molar mass, concentration, volume, temperature—and noting how they appear in the problem statement. Listing them on a sheet creates a visual map of the equation's skeleton. Look for standard molar volumes (22.4 L at STP) or common ionic charges. Once a recurring factor is spotted, replace it with a shorthand (e.g., $V_m = 22.4 \text{ L}$) to streamline subsequent algebra. Graph the relationship between concentration and volume; linear graphs often hint at direct proportionality.
