failing to consider the needs of all users. For example, a court designed solely with professional players in mind may not be suitable for younger or recreational players. Similarly, a court that is too small or has inadequate lighting can be dangerous and uncomfortable for players. By considering the diverse needs of users, architects can create courts that are safe, functional, and enjoyable for everyone. Rather than relying on traditional design methods, architects can use smarter alternatives to create innovative and effective basketball courts. One approach is to use modular design systems, which allow for easy customization and reconfiguration of the court layout. This can be particularly useful for courts that need to accommodate multiple sports or activities. Another approach is to incorporate sustainable materials and design principles, such as using recycled materials for the court surface or incorporating.
